PROFILE

Data Analyst with 2+ years of experience using SQL, Python, and Power BI to turn business and e-commerce data into actionable insights. Manage end-to-end analytics for a US-based Amazon brand — 50,000+ records, \$600K+ in ad spend — diagnosing issues like a 94% ACOS down to specific non-converting keywords, not just flagging the campaign. Also built a restaurant operations analytics system from scratch, later expanded into a full Python/Excel data project. Skilled in data validation, dashboarding, and stakeholder reporting.

CORE SKILLS

Languages & Query Tools: SQL (joins, aggregations, subqueries, CTEs, window functions, CASE statements), Python (Pandas, NumPy, Matplotlib, Scikit-learn), PostgreSQL

BI & Visualization: Power BI (DAX, Power Query, data modeling), Tableau, Excel (Pivot Tables, SUMIFS/AVERAGEIFS, VLOOKUP/XLOOKUP, advanced formulas, dashboards)

Core Competencies: Data Cleaning & Validation, KPI Reporting, Dashboard Development, Statistical Analysis, ETL Concepts, A/B Testing, Data-Quality Investigation, Stakeholder Reporting & Data Storytelling, E-commerce & Business Analytics, Snowflake, Star Schema

Other Tools: Git, Jupyter Notebook, Google Sheets, AI-assisted analytics workflows (Claude, Copilot)

Languages: English (professional), Urdu (native)

PROFESSIONAL EXPERIENCE

Data Analyst & Operator — JDV Enterprises LLC (Luxmiel) (US-based Amazon e-commerce brand | Remote)

2024 – Present

- Own end-to-end analytics for a US-based Amazon brand — 50,000+ records, tracking ROAS, CPC, and conversion KPIs.
- Diagnosed a 94% ACOS down to specific non-converting keywords; recommended bid and negative-keyword changes that cut wasted spend.
- Built recurring Power BI/Excel dashboards for sales, ad performance, and inventory monitoring.
- Recommended bid adjustments and a negative-keyword strategy that directly reduced wasted ad spend on underperforming campaigns
- Cleaned and validated multi-source datasets against a validate-before-publish standard on every recurring report.
- Communicate findings and recommendations directly to the brand owner to inform pricing, budget, and inventory decisions.

Operations Manager — Taj Bites & Beyond (Independent restaurant | Rawalpindi, Pakistan)

2021 – 2024

- Managed daily operations, staff, and vendors for an independent restaurant while completing a BS in IT.
- Built a custom Excel cost/inventory system from scratch — no POS, staff unable to use a written system for every item.
- Solved untrackable items (e.g. fries sold by loose scoop) by using nightly cash counts to back into sales; tracked profit over 13+ months — later became the base for a full data analytics project.
- Delivered Rs. 4.77M in analyzed sales, 24.53% gross margin, and 12.63% net margin, with a 78.74% profitable-day rate.
- August 2023 was the strongest month by sales and profit; Friday was the top-performing weekday.

ANALYTICS PROJECTS

- Restaurant Business Performance Analytics** (Python, Pandas, Excel) — github.com/ahmedkhalidse8/Taj-Bites-Analytics: Built an end-to-end analytics workflow (audit, cleaning, validation, EDA, Excel dashboard) on 381 days of self-generated restaurant records; caught and excluded an unreliable profit-margin data-quality issue; delivered Rs. 4.77M in analyzed sales and a 78.74% profitable-day rate.
- Amazon PPC Performance Analysis** (Python, Power BI): Cleaned and analyzed campaign, keyword, and search-term data; built a 3-view Power BI dashboard (Executive Overview, Campaign Performance, Keyword Insights) tracking ACOS, ROAS, CTR, and CPC; identified a 94% ACOS issue and proposed an optimization strategy.
- Sales Performance Dashboard** (Power BI): Built an end-to-end dashboard analyzing 50,000+ orders (\$12.64M in sales) using the Global Superstore dataset, tracking revenue, profit, product-category performance, and regional sales distribution.
- E-commerce Funnel & Customer Analysis** (Python, Power BI): Analyzed ~50K customers and \$681M in revenue; segmented customers into high/medium/low-value tiers and built a Power BI dashboard to uncover revenue drivers and retention opportunities.
- Customer Segmentation Analysis** (Python, K-Means): Applied K-Means clustering with elbow-method validation to identify behavioral customer segments and translate clusters into targeting recommendations.
- SQL Business Analysis** (PostgreSQL): Wrote complex SQL queries (joins, aggregations, CTEs, CASE statements) against the Chinook database to extract revenue, customer, and sales-trend insights across top markets.
- Marketing Campaign Performance Analysis** (Python): Evaluated campaign conversion rate and ROI across customer income, channel, and product category to generate optimization recommendations.

EDUCATION

BS, Information Technology — University of Gujrat

2020 – 2024

CGPA: 3.07 / 4.0
